received 7 September 2021; accepted 30 September 2021

### **Abstract**

This study foregrounds the Native Hawai'ians' interconnection between culture and nature through ecolinguistics analysis of *the Wind Gourd of La'amaomao*. The language use in this Hawai'ian folktale emphasizes the reverence Hawai'ian people have toward their environment based on familial kinship. The analysis mainly focuses on two aspects of language use in accordance with Stibbe's theory of ecolinguistics, ideology/discourse and evaluation/appraisal. The study also posits the ecosophy/ecological philosophy derived from the text in consideration with the current state of environmental crisis. The finding argues that the discourse employed in the text is positive, based on recognizing the need of sustainability. The positive discourse is also reflected through close emotional connection between people and place as seen through wind naming pattern and Hawai'ian place names. Secondly, nature is also appraised positively with celebratory tone and in term of vocabulary used. The study concludes that alternative way of perceiving the environment as seen from the reading of *the Wind Gourd of La'amaomao* should be considered as a critique toward Western anthropocentrism.

Keywords: Hawai'ian literature, ecolinguistics, language use

### **Introduction**

In recent years, a growing interest of the environment, or the 'environmental turn' is observed among scholar of humanities. This issue is intertwined within a burgeoning awareness of environmental problems on a global scale, such as climate change and ozone layer depletion. In the Anthropocene Era, Western's perception toward nature is considered as one rationalization behind the current environmental crisis which lead into the necessity of perceiving alternative paradigm of human and nature relationship. The epistemology of indigenous people, once criticized as the example of the backwardness of non-Western culture is now contemplated as a more sustainable outlook in conceptualizing humanity's position within a wider ecosystem. (Buell, Heise, & Thornber, 2011) The indigenous perspective on the environment is articulated through their language use and their cultural production. Indigenous people, through their interaction and negotiation with the environment have developed detailed system of first-hand knowledge about local environment and their dynamics, as well as the resulting practices, beliefs, institutions, and traditions.

The sanctity of nature is emphasized through epistemology that emphasizes interconnection of all entities.

For Native peoples, ecology is the cosmology of interrelatedness. This interdependent orientation includes all things within the ecosphere (planet), as well as above and outside of it (sun, moon, stars, planets, spirits, and ancestors). Within the material realm there are humans and nonhumans such as plants, minerals, and animals—what we call “nature.” (Machiorlatti, 2010, p. 65)

The adherence towards nature, reflected in their language, worldview, tradition and cultural production can be observed in Hawai’ian indigenous ethnic group/*Kanaka Maoli*. Hawai’ian indigenous people are a society that conceptualizes nature as the founding tenets of their pre-Western contact tradition and is still observed into the contemporary period. Hawai’ian conception of nature highly regards nature not only as having intrinsic value by itself but also contains sacred values. Nature is foregrounded as the basis of Hawai’ian indigenous culture in form of local wisdoms, prohibitions (*kapu*), genealogical/familial tree from shared ancestry of mythological figure, ancestral knowledge, both orature/oral and written literature. These aspects in Hawai’ian tradition exemplifies the centrality of nature within their culture.

Hawai’ians’ respect toward nature is derived from a shared familial tie that asserts nature as the biological sibling of their ethnic ancestors. The creation myth of *Kanaka Maoli*, as canonized in the book of *Kumulipo* (Beckwith, 1972) positions the native people of Hawai’i as the youngest child from the deities *Papa* and *Wakea* and the islands of the archipelago as their elder siblings. As the youngest sibling, Hawai’ian people are responsible to preserve and maintain nature which in turn will repay their kindness through providing provision to sustain living.

The *Kanaka Maoli* have a genealogical, familial relationship to the land. The islands were said to have been conceived and born like human beings, of the same parents, *Papahanaumoku* who gives birth **to islands and Wakea**, the sky father ‘who creates the stars in the heaven’. (N. K. Silva, 2005, p. 22)

The principle of reciprocity based on kinship underlines Hawai’ian perception of nature. The indigenous people consider nature as their elder sibling, and it is their duty to be the caretaker of the land, a principle different with Western epistemology that seek to control and conquer nature. The concepts articulated within Hawai’ian language ‘(*olelo Hawai’i*) are the manifestation of an indigenous epistemology based on love and respect of the land.

Several concepts within the Hawai’ian local wisdom positions nature as the source of knowledge. The idiom *kama’aina*, the child of the Hawai’ian land/*aina* symbolizes an inseparable relationship between the Hawai’ian people and their birthland. In line with *kama’aina*, the concept of *malama’aina* in which *malama* can be interpreted as nurturing or caring asserts the responsibility of the Hawai’ian islanders to preserve, maintain, and protect the nature as their oldest sibling. A study by Nero (1997) illustrates that the word *aina*, although can be simplified as land in the English translation evoke a much deeper meaning based on the reciprocal relationship between the *Kanaka Maoli* and their environment. *Aina* can be

interpreted as that which feed us, and the word *ai* itself is the Hawai'ian word for eat, a recognition that it is nature which allows humanity to survive and flourish. Furthermore, the word *aina* is connected with the Hawai'ian word for family/*ohana*, in which '*oha* refers to the branches of taro plant, a plant symbolically believed to be genesis of Hawai'ian people. The image of taro plant reflects a Hawaiian perspective of family, with both joined in the mutual dependence on the roots.

The emotional association between *Kanaka Maoli* and *aina* can also be viewed from the naming of the place, the natural elements, and the certain landmarks in which certain meanings are associated within the naming pattern. In relation to the statement, Kimura (1983, p. 178) argue that

Hawaiian place names further demonstrate the intimate relationship between people and the environment, the evocative power of place stems from *alona aina*, or love of land, pride of place.

Hawai'ian indigenous people considers naming pattern to include a story (*mo'olelo*) that becomes the basis of the name, whether a legend, an appearance of the gods, a historical event, or a natural phenomenon that takes place around the name. (Clark, 2002; Herman & Berg, 1999) A book entitled *Place Names of Hawai'i* (1966) has summarized 1,125 names of places in Hawai'ian language and when the book was reprinted in 1974 with more addition of place names, resulting in 4,000 names of places in overall, the authors concluded that completely record all Hawai'ian place names is an impossible task.

“How many place names are there or were there in the Hawaiian Islands? Even a rough estimate is impossible: a hundred thousand? a million? Hawaiians named taro patches, rocks and trees that represented deities and ancestors, sites of houses and heiau [places of worship], canoe landings, fishing stations in the sea, resting places in the forest, and the tiniest spots where miraculous or interesting events are believed to have taken place.”(Pukui, Elbert, & Mookini, 1974, p. x)

Story (*mo'olelo*) is another way of inheriting history, tradition, and belief of the Hawai'ian people through orature. Ho'omanawanui (2015) has found that the word *mo'olelo* originates from the combination of two words, *olelo*, which can be defined as language, word, pronunciation, discussion, and storytelling, and *mo'o*, a preservation. *Mo'olelo*, as Ho'omanawanui asserts can be defined as the preservation of a story recalling the fact that all stories in Hawai'i in the past are oral instead of written (p. 86). Continuing the elaboration by Ho'omanawanui, Kay-Trask (1991) argues that *mo'olelo* is one avenue for *Kanaka Maoli* to preserve their history. To her understanding, *mo'olelo* is the retelling of something that had really happened in the past instead of fiction or imaginary thing. The word *olelo* means both 'tongue' and language', *mo'olelo* or 'history' is everything that comes from the tongue, or a story.(Kay-Trask, 1993, pp. 141–142)

The Hawai'ian folktales also have a social function as a tool for preserving the local wisdom and the local knowledge especially in relation to the position of human beings amidst the universe. The other forms of the folktales are parables, sermons, and advices (*olelo no'eau*) that teach the novel values of Hawai'ian culture especially the respect to the elders, the nature, and all of the entities throughout the

world ((Elbert & Pukui, 1979; Fujikane, 2016; Williams, 1997)Through *olelo no'eau*, the older generation (*kupuna*) preserves Hawai'ian conception of nature as part of their family/*ohana* toward the younger generation. Several idioms such as *Ka La i Ka Maulioa* (sun is the source of life) and *He ali'i ka aina, he kaua ke kanaka* (land is the chief and mankind are his servant) articulates the ecological wisdom located within Hawai'ian local tradition. These proverbs refigure human and non-human relationship by emphasizing human's dependence toward the non-human entities.

This study analyzes a Hawai'ian folktale, *the Wind Gourd of La'amaomao* to further establish the close connection between language use and adherence toward the environment in Hawai'ian tradition. Ecolinguistics approach is applied as it focuses on the study of language according to the environment it is used to, or in other words, exploring the interconnection between nature and culture. From an ecolinguistics perspective, the environmental language and language environment are considered as metaphorical expressions which explain the correlation between the linguistics and environmental sciences. The analysis mainly explores the love and respect toward the environment from language used to describe the environment, mainly concerns with the naming pattern of various Hawai'ian winds and place names.

### **Theoretical Framework**

*Ecolinguistics* is the study of [languages](#) in relation to one another and to various social factors which is also known as *language ecology* or linguistic ecology. The seminal theory of this field is often associated to Einar Haugen through his book, *The Ecology of Language* (1972). Haugen mainly discusses the lexicons contained in environmental discourse text and proposes his definition of ecolinguistics as the study of interactions between any given language and its environment. The word ecolinguistics includes both the term *eco* -a shortened form of ecology- correspondents with the relationship among organism, including human with other organism and the physical environment and linguistic itself, the study of human speech. (theorist) From an ecolinguistic perspective, the environmental language and language environment are considered as metaphorical expressions which explain the correlation between linguistic aspects and the environment which is negotiated through the use of language. It is further noted that

ecolinguistics is the study of the impact of language on the life-sustaining relationships among humans, other organisms and the physical environment. It is normatively orientated towards preserving relationships which sustain life. In other words, ecolinguistics is concerned with how language is involved in forming, maintaining, influencing or destroying relationships between humans, other life forms and the environment. (Alexander & Stibbe, 2014, p. 104)

Thus, ecolinguistics contextualizes the role of language within an interaction that sustains the lives of humans, other species, and the physical environment (Perangin-Angin & Dewi, 2020). One particular example of cultural production which grows, develops, and reflects the socio-cultural condition of a given society is folklore, a form of oral literary works which was born and developed in a relatively fixed time among certain communities. Folklore can be interpreted as the example of a society's

cultural expression through speech language which is directly linked with various aspects of socio-cultural structure of a particular society. Furthermore, how a society contextualizes the environment and their position within a wider ecosystem is also reflected through folktale. Machiorlatti (2010, p. 65) affirms how folktale contains the indigenous discourse of ecology, the cosmology of interrelatedness which includes all things within the ecosphere/planet and also on spiritual realms such as spirit and ancestors.

In his book, *Ecolinguistics : Language, Ecology and the Stories We Live By* (2018), Stibbe posits an ecological framework derived from the analysis of language pattern in stories. Stibbe comprehends how stories inherited by various individuals across a culture, or what he coins as ‘stories we live by’, can either perpetuate or hinder current ecological crisis. These stories, as Stibbe argued are embedded within language and culture and reflected in metaphors, appraisal patterns, and a variety of linguistic features and/or visual elements. (Poole, 2017, p. 524) In his understanding, there exist eight forms that story takes and their linguistic manifestations.

1. Ideology: how the world is and should be which is shared by members of a group
  2. Framing : a story that use a frame (a packet of knowledge about an area of life) to structure another area of life
  3. Metaphor: a story that use a frame to structure a distinct and clearly different area of life
  4. Evaluation: a story about whether an area of life is good or bad
  5. Identity : a story about what it means to be a particular kind of person
  6. Conviction: a story about whether a particular description of the world is true, uncertain or false
  7. Erasure : a story that an area of life is unimportant or unworthy of consideration
  8. Salience : a story that an area of life is important and worthy of consideration.
- (Stibbe, 2015, p. 15)

Stibbe concurs that the aforementioned linguistic features should be appraised within an ecosophy (a shortening of ecological philosophy) that contemplates the norms and values that regulate human’s position inside a wider ecology. Stibbe derives his conception of ecosophy in one word, “Living”, which is based on the necessity of valuing and respecting all entities right to live, to live with wellbeing both in the current era and sustaining the earth for future generation. (2015, p. 14) It can be phrased that this ecosophy is intended to form a beneficial discourse toward environment and presenting a more sustainable outlook for generations to come.

### **Findings and Discussions**

*The Wind Gourd of La’amaomao* or *Moolelo Hawaii o Pakaa a me Ku-a-Pakaa, na Kahu Iwikuamoo o Keawenuiaumi, ke Alii o Hawaii, a o na Moopuna hoi a Laamaomao* in Hawai’ian is an example of an adaptation of Hawai’ian oral tradition into written form. The original version was adapted from the recounting of *Ku-a-Paka’a* by Moses Nakuina and was compiled as a newspaper serial in *Ke Aloha Aina* in the 1900’s. This story had been translated into English several times, included in William Hyde Rice’s *Hawai’ian Legends* (1923), an abridged version in Thomas G. Thrum’s *More Hawai’ian Folktales* (1923) and *the Backbone of the King* (1966) by

Dorothy Kahananui. The current translation to English was done by Esther T Mookini and Sarah Nakoia in 1990 and was revised in 2005. While prior translations of the *Wind Gourd of La'amaomao* were only a simplification or summary of the narration, the 2005's version as the object of this study is a complete translation which includes all the plot points and chants.

The story mainly focuses of the three generations of the *kahu iwikuamo'o*/personal attendant of Keaweanuia'umi, the ruling chief of Hawai'i, the grandfather Kuanu'uanu, his son Paka'a and his grandson Kua-Paka'a. While on a journey to O'ahu, Kuanu'uanu marries a beautiful woman named La'amaomao and have a son, Paka'a with her. After being summoned by his liege, Kuanu'uanu is forced to return to Hawai'i and left his family behind. After Paka'a reaches adolescence, his mother gives him a mythical gourd containing all the winds of the Hawai'ian islands and the chant required to summon the wind. Paka'a ventures to Hawai'i, meets his father and eventually replace him as the personal attendant of Keaweanui'umi. Later in the story, Paka'a is betrayed by two other attendants of Keaweanui'umi, Ho'okele-i-Hilo and Ho'okelei-i-Puna and exiled to Moloka'i. During his time in Moloka'i, he gets married and have a son named Kua-Paka'a. Meanwhile, his former chief grows dissatisfied with his new attendants and seeks to restore Paka'a to his former position. Although Paka'a is willing to return, he understands that as long as his rivals remains in the court, his position remain unsecure. He sends his son Kua-Paka'a to employ the wind gourd and make sure his rivals get lost in open sea. The story ends with the reunification of Paka'a and his liege, Keawenuia'umi and the restoration of Paka'a former rank and lands.

As a cultural production of the Hawai'ian indigenous people, *the Wind Gourd of La'amaomao* provides an avenue to contextualize *Kanaka Maoli's* reverence toward nature. This conception of nature, underlined through the narration, articulates the dominant discourse of the *Kanaka Maoli* which is beneficial or positive in outlook. As articulated by Stibbe, discourses can be defined into several examples depended of their position toward nature and current environmental crisis, destructive discourses, ambivalent discourses, and beneficial discourses. The discourse underlined in *the Wind Gourd of La'amaomao* is beneficial in outlook and it provides a counter discourse toward Western reductionist view of nature by emphasizing the need for sustainability.

In the text, the concept of sustainable living is articulated through the existence of annual fishing season and proverb advocating preservation. The fishing for *malolo* (flying fish) for example is only allowed on May until June. "*Ka'elo* (May-June) was when the first *malolo* was eaten and *malolo* was so plentiful that the fishermen's container were full to the brim." (Nakuina, 2005, p. 108) The existence of *kapu* protected these fish from being overfished and killed during their spawning seasons, hence insured their survival. *Kapu* (taboo) were enacted on several aspects, limiting how much can be taken from both the land and the sea, *Kanaka Maoli* employs conservation in fishing, hunting, and gathering of resources. Furthermore, a Hawai'ian proverb recounted in the text illustrates the necessity of sustainable living, "*he wa'a he moku, he moku he wa'a* which can be translated as the canoe is an island, and the island is the canoe. (Nakuina, 2005, p. 23) Embarking on a canoe voyage requires rationing of resources, water, food and contribution from all people abroad, similarly, the Hawai'ian Isle in particular and earth in general requires sustainable living to preserve it for the future generation.

The close emotional connection between the Hawai'ians and their surroundings, as a reflection for a positive discourse of environmentalism can also be observed in the naming pattern. As briefly illustrated in the prior section, Hawai'ian naming pattern is associated with stories / *mo'olelo* related with local legends, folktale, historical occurrences, or natural phenomena. The importance of naming in *the Wind Gourd of La'amanao* mainly focuses on two aspects, variety of winds in Hawai'ian archipelago and place names. Nash (2015) asserts that place names/toponym is an important cultural and environmental artifacts belonging to a nation and its language. In the story, Kua-Paka'a demonstrates his proficiency in Hawai'ian ancestral tradition by memorizing the wind names in the island of Hawai'i, O'ahu, Kau'ai and Moloka'i through various chants. Hawaiian chants, as reflected in *the Wind Gourd of La'amanao* create a distinct naming pattern for wind and rain which was observed or experienced in a particular place. The diversity of wind naming pattern based on a particular locality in Hawai'ian islands is articulated through the following chant

Here, there are the winds rising from the earth,  
The *Apa'apa'a* is of *Kohala*  
*Apa'apa'a* is of *Kohala's* upland cliffs  
The wind that flies about like vapor  
The raining wind called *Naulu* is of *Kawaihae*  
The *Kipu'upu'u* is of *Waimea*  
A cold wind that hurts the skin  
A wind that whips the kapa of that land about (Nakuina, 2005, p. 42)

The presiding passages, recounting a chant in *the Wind Gourd of La'amanao* illustrates the interconnection between culture and nature in Hawai'ian language. While the general vocabulary for wind in *Olelo Hawai'i* is *makani*, there exist naming convention associated with variety of winds due to certain characteristics and its location. The wind *apa'apa'a* is the name of a famous wind from *Kohala*, north western tip of *Hawai'i* island located on the slope of extinct volcano *Mauna Lea*. Located in the intersection between sea, mountainous cliffs and slope, a distinct characteristic of this wind is its ferocity, as the winds crosses the channel with such force that the tree on the coastline lean toward the mountain. Different with *apa'apa'a*, *naulu* is a convection wind that precede rain, originated from the word *ulu* (to grow). Hawai'ian people of old considers the forming of convectional clouds to resemble a plant growing out from the ground, which lead into the naming of *naulu* for a wind in *Kawaihae*. (Oliveria, 2009)The place name *Kawaihae* itself is derived from three words, *ka* (the), *wai* (fresh water) and *Hae* (something torn) which can be translated as fresh water that separate people. This name originated from the historical circumstances concerning the limited availability of fresh water in *Hawai'i* which lead to constant warfare to acquire water spring. Other example is the naming pattern of *Kipu'upu'u*, a swift and powerful rain in the *Wai'mea* which is described in the text as 'a cold wind that hurts the skin' as it blows away from snow-capped *Mauna Kea*. Historically, the name *kipu'upu'u* as a symbol for ferocity and tenacity is taken by the personal guard of King *Kamehameha* the unifier who were trained in *Wai'mea*, an area believed to be haunted due to constant rain. (Pukui et al., 1974, p. 56)

Another chant recounted in the text stresses that the Hawai'ian naming pattern is not localized in a particular island but is a convention held all over the archipelago. Kua-Paka'a inherited the generational legacy of *Kanaka Maoli* in form of wind naming pattern and place names through the chant that describe the variety of wind in Maui island.

There, there, the windy clouds rest,  
The *Pali* is *Hilo*'s wind  
*Paki'ele* is of *Waiakea*  
*Hana*'s winds are 'Ai-maunu,  
*Kaomi*, *Kapae*  
*Ho'olua*, *Lauawaawa*  
*Pailopaowa*, *Halemauu*  
*Kui*, *Kona* ;

The wind *Pali* which blows in *Hilo* region is derived from the word *pali* (cliff), in which the translation can be defined as cliff wind from below. As a place name, *Hilo* which literally means 'to braid or twist' derives its name from a legend concerning Kamehameha and his follower, in which Kamehameha was angry that his follower left the canoe unattended but it is later found out that the canoe has been twisted with cordage. Different with the hilly terrain of *Hilo*, *Waiakea* which is derived from *Wai* (water) can be translated as broad waters, due to the fact that this particular region gets almost 360 days of rain a year. The wind that blows in *Waiakea* is named *Paki'ele*, derived from the word *paki* (to splash) which indicate the wet nature of *Waiakea*'s wind due to high rainfall. Lastly, the diverse variety of wind names in *Hana* is linked with its location in the central tip of Maui island. Being close to the shorelines of Hawai'i island, the name of the wind changes depending of the direction of the trade wind. *Kaomi* refers to northeast trade wind, *Kapae* indicates trade wind in general and *Ho'olua* is named for strong north wind which is generated by storm system passing north of the islands. The prior exposition highlights how the distinctive tropical climate of an archipelago results in the diversity of place names and wind naming pattern depending of the situation.

Another example of reverence toward nature as the provider of life is the celebratory vocabularies employed to praise the tropical weather of Hawai'ian isle. The beauty of natural landmarks, both sunny days and rainy days, and the rich bounties provided by nature is considered as a blessing by the Hawai'ians gods especially the four pantheons, *Ku*, *Kane*, *Kanaloa*, and *Lono*. Silva articulates that a *pule* (prayer) was addressed to both the spirits and ancestors/*aumakua* in four wind direction so that the people will be blessed in turn. (2019, p. 83) The feeling of gratitude is reflected through the language uses that celebrates nature as source of life. Stibbe (2015, pp. 86–87) identifies appraisal pattern – whether something is described as either positive or negative in texts- to highlight the perception of feeling toward a particular area in live. The positive appraisal of nature in *the Wind Gourd of La'omaomao* can be observed in the following chants,

the rain falls  
the misty, sticky, rain of *Hanakani*  
Gentle and passing is the rain,

Muddy and wet is the sand (Nakuina, 2005, p. 35)

The rain draws the school of *nehu* seaward of *Punahoa*  
The adze-headed rain in the *Unulau* wind  
The *lehua* blossoms open in the zigzagging rain,  
The warm rain of the land of *Hilo*  
The land of *kuluku 'a* (Nakuina, 2005, p. 43)

Appraising language use within the preceding chant articulates how nature in *Kanaka Maoli's* conception is portrayed in a positive light. Several positive appraisal items in the prior chants are 'gentle' 'passing' and 'warm' which evoke the nurturing aspect of nature and encourage the islanders to embrace the beauty of their surrounding landscape within pleasant weather. Another example of positive appraisal items that celebrates the bountiful nature can be seen in the phrase "the rain draws the school of *nehu*" which indicates how the islanders can more easily caught *nehu* fish after rainfall. The rain causes the sea to blow up the *nehu* fish in rows until they rest in the calm sea of La'akona. (Titcomb, 1972, p. 112) Moreover, relating rainfall with the blossoming of *lehua*, a colorful flower used in *hula* dances also articulated the positive appraisal of nature through the interconnection between natural phenomena and wild plants necessary for Hawai'ian cultural performances. While the word 'misty' might evokes negative perception due to being the opposite from warm weather, its Hawai'ian word, '*ohu* can be translated as mist, fog, vapor, or light cloud in a mountain. Interpreting *Ohu* as light cloud in a mountain evokes the image of a wreath around the neck which aligns with a positive appraisal of nature.

The positive appraisal of nature in Hawai'ians' conception is further rooted within a sense of respect and acknowledgement of nature's own agency. Different from Western epistemology that seeks to control and exploit nature, (Marzec, 2007, p. 36) *Kanaka Maoli* recognizes the agency of nature as something beyond human comprehension. The Hawai'ians' islanders believe that all entities, both biotic and abiotic elements possess *mana* (power) in which natural phenomena, considered as the manifestation of gods' power in earth contains *mana* in particularly large amount. This recognition of nature's agency conceptualizes human as powerless in the face of natural disaster and only capable to predict instead of manipulating nature. The knowledge of wind patterns and able to predict when storm will occur is a necessity skill in pre-contact Hawai'i which employs canoes are the principal medium of transportation. In *the Wind Gourd of La'omaomao*, it is narrated that Paka'a and his son Kua-Paka'a is learned in both the laws of the skies and nature of the earth through their knowledge of various wind patterns, astronomy, and navigation. Kua-Paka'a convinces the voyage of Keaweanuia'umi to land ashore in Moloka'i as a terrible storm will soon occurs

"Tomorrow is a calm day for sailing ; today will be stormy ; there are thick cumulus clouds resting above *Kawainui* and the ridge of *Wailau*, when these clouds are blown with full force, a terrible storm will rage ; when the clouds are at rest again, then good weather will follow." (p. 38)

The prior passage contextualizes Hawai'ians' respect for the uncontrollable agency of nature. As a pre-modern society in which technological progress to safely

venture in the open seas during stormy weather is limited, ability to observe the sign of nature is essential for inter-island navigation. Inability to interpret the changing weather can lead into disastrous consequences, as highlighted through the following passage which emphasizes the danger of nature toward unprepared individuals.

A big storm overtook the canoe. The winds blow hard, driving the canoe out into the open sea. The skies darkened, lighting flashed, thunder roared, and rain pelted down. The storm was boundless. The canoe was buffeted by the wind, and Kaua'i almost disappeared. (p. 83)

The beneficial environmental discourse and positive appraisal of nature in *the Wind Gourd of Lao'maomao* aligns with the need of contextualizing alternative perception of environment in light of current ecological crisis. Different with Western conception that nature exist for the humanity's benefits, *Kanaka Maoli* recognizes the need for sustainability, having deep seated emotional attachment with their surroundings, and understanding nature as having its own agency. (Lynch & Glotfelty, 2012, p. 6). *The Wind Gourd of Lao'maomao* underlines the epistemology of *aloha aina* (love for the earth and all its entities), based on the Hawai'ians' conception of nature based on familial ties. To the Hawai'ians, as the land and all the entities are part of their extended family (*ohana*), they have to treat it with care and respect in a reciprocal relationship. (Indriyanto, 2020, p. 4) This story promotes an ecological philosophy/ecosophy founded on ecological sustainability, equality among all entities and harmonious living with nature. The positive appraisal of nature contemplates nature as something to be valued, respected, and celebrated. Positioning the analysis of *the Wind Gourd of Lao'maomao*, within the realization of current environmental crisis, it can be asserted that the ecosophy goes beyond sustainability to present generation, but to find alternative environmental discourse that seeks to restore the harmful deeds humanity has done toward the environment.

## Conclusion

Ecolinguistics analysis of *the Wind Gourd of La'amaomao* underlines Hawai'ians' epistemology based on the interconnection between culture and nature. Language use in *the Wind Gourd of La'amaomao* articulates the love and respect Hawai'ian people have toward their environment based on familial ties. The analysis mainly concerns with two aspects of language use as articulated by Stibbe's theory of ecolinguistics, namely ideology/discourse and evaluation/appraisal and the ecological philosophy derived from the narration. The study argues that the discourse employed in the text is positive, based on recognizing the need of sustainability. The positive discourse is also reflected through close emotional connection between people and place which is reflected in wind naming pattern and Hawai'ian place names. Secondly, nature is also appraised positively as seen in the celebratory tone and vocabulary used. These arguments illustrate an ecosophy based on ecological sustainability, equality among all entities and recognition of nature as having its own agency and intrinsic values. This ecosophy explores the necessity of finding alternative ways of conceptualizing environment as a critique to Western anthropocentrism.
